DETAILED ACTION

The art unit designated for this application has changed. Applicant(s) are hereby informed that future correspondence should be directed to Art Unit 1631.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-29, drawn to a method of determining the likelihood of the presence of a biomolecule and article of manufacture, classified in classes 436 and 211, subclasses 173 41.12, respectively.
- II. Claims 30-33, drawn to an apparatus, classified in class 422, subclass 50.

These groups are distinct, each from the other because of the following reasons:

Groups I and II are different and distinct because they each are based on critically different features. The critical feature of Groups I is based on a method of determining the likelihood of the presence of a biomolecule. The critical feature of Group II is based on an apparatus. These separate entity types are often separately characterized and published in literature, thus adding to the search burden if all Groups were searched together. Thus, the two Groups are independent and/or distinct invention types for restriction purposes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
